

Company Profile

Here at Hubert, founded in 1880, we have almost 150 years of experience in design and engineering, in-house manufacturing, installation and service of equipment for water purification and water intake applications. Our engineered products and technical expertise have enabled us to become a major player on the global markets for water treatment solutions. We focus on high-quality equipment with a long service life.

Over the years we gained an extensive number of satisfied customers and project references all over the world. Our machinery is a crucial part of every production facility and usually continuous in operation. Our equipment has to operate efficiently and reliably in extreme weather conditions. Hubert's installed base comprises many thousands of installations that have recently been commissioned, or have been in operation for many years.

Below you can find more information about our divisional structure. We will be happy to hear about your project!

Our Divisions

Water Intake Systems

Hubert is market leader in water intake screening systems, used for mechanically clean water extracted from the sea, rivers or lakes. These systems can be found in nuclear plants, power stations, petrochemical plants and refineries, desalination plants, drinking water and irrigation plants, and industrial production plants requiring a huge supply of process water.

We supply complete 'screening trains' including all additional equipment such as controls and cathodic protection. Our engineering department can design a custom intake screening system for your project. Because of in-house manufacturing, we can guarantee the highest quality.

Waste Water Treatment Machinery

Hubert supplies waste water treatment machinery and installations/sub-installations applied in municipal and industrial waste water treatment plants. Our installations are of high quality and offer a long service life. Clients range from water boards and authorities in the public sector, to multinationals in many industries.

Service & After Sales

The daily work of our Service and After Sales division is to keep your machinery operational. This proves its importance by keeping Hubert installations operational anywhere in the world. Founded in 1880, the large number of projects that Hubert has carried out over the years has resulted in a huge installed base of equipment, and many of these are still in operation! We supply parts but can also provide optimization and renovation of your existing equipment.

High-Spec Steel Assemblies

Hubert has been supplying components as well as assembled units to the offshore industry and other applications within the shipping and dredging industry for many years. Complex machined welding constructions, single pieces, assemblies and sub-assemblies, and complete products are part of our programme. For this market we work according to customers' mechanical specifications
